Branch connection

Connect all of your facility's separate branches into one so that all of your managed services from your accounts, servers, telephone systems and cameras can become interconnected with easy access and great transfer speed

Networks

Your facility will become connected to fast and reliable networking using our networking technologies ranging from LAN to WLAN with the use of our cutting-edge routers and switches at your full control.

Data center

Centralize your facility's services in one organized place and guarantee the protection and regularity of your data center with our extensive bundle of monitoring and maintenance of all your of central services to keep everything running in check and at max efficiency

Servers

Increase your productivity and focus on your business and let our state of-the-art servers take care of everything IT related for you, from data management, storage, hosting and more with full access and customized hardware and software specifications that suit your facility whether small or big

Telephone and communication

Have comprehensive communications of and within your facility using our services ranging from telephone-central systems, unified number, auto responses and forwarding, email, managing and organizing calls, interactive meeting and mentoring and more

Security systems

Keep all your data safe from any possible mistake done by the workers or an intended attack from outside with our advanced and comprehensive anti-virus programs and firewall systems which can predict, detect, alarm, and execute any necessary action to ensure the safety of your facility.

Surveilling systems

Enhance the security of your property, personnel and costumers and improve your operational efficiency and flexibility with our advanced cutting edge surveilling camera systems with a wide range of features such as facial and plate recognition, artificial intelligence and smart control from anywhere to keep everything in check.

Maintenance services

Ease your mind and ensure the continuity of your work as required during contract with our comprehensive and convenient maintenance with any issues for your entire facility and lift the burden of the staff team so that you could focus on productivity.

Consultant services

Be reassured with our expert consulting service for you in all matters related to the field of information technology systems that pertain to your establishment and help design complete data centres.

Cabling and infrastructure

Enhance your facility's infrastructure with it's own premium cabling to guarantee your connections stay up and running fast no matter what using our highest standard copper cables (UTP) or optical fibers

Dedicated Internet Access Service (DIA)

Dedicated connectivity provides our customers with a secure and reliable internet connection with high speeds. Dedicated Internet access is a type of Internet service where bandwidth is allocated exclusively to a single user or organization, and this means that the user has access to the full capacity of the connection at all times without having to share it with other users. It is typically used by businesses and organizations that require a reliable, high-speed internet connection to support critical applications and services.

Speed: Dedicated internet has better speed than shared internet.

Quality: Dedicated Internet servers provide better quality and reliability.

Clarity: Dedicated Internet servers have better image and video clarity and sound quality.

Internet Protection Service

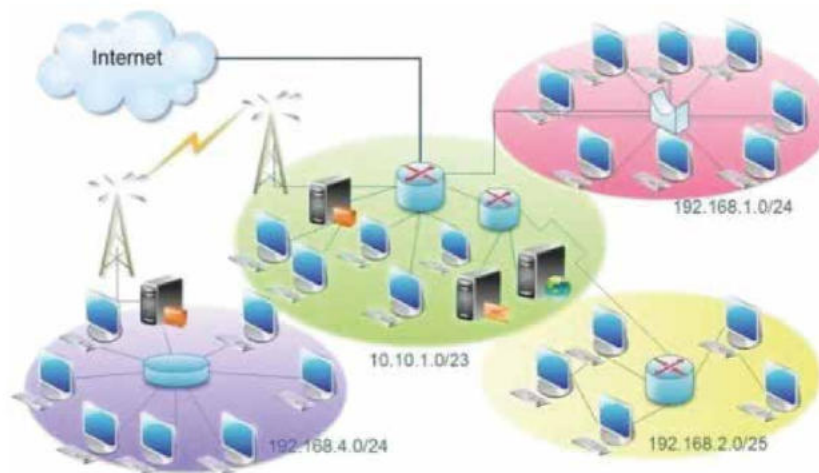

Guarantee maximum protection and keep hackers, viruses and attacks at bay and ensuring your business information is safe. One challenge facing businesses is the threat of cyber crimes and cyber breaches. Security should relate to every business as it's vital in protecting yourself, stock and customers. By protecting your business online, you are taking the correct steps to keeping your data safe. Malware and viruses can cause your business to suffer, so having good security can boost productivity. Cybercrime can encompass a whole host of different crimes and fraudulent activity.

We will provide you with an internet protection service that includes a range of security features such as firewalls, antivirus software, and intrusion detection systems. These security features help protect your business from cyber threats such as malware, viruses
